

CONTAINER PARKS AND DEPOTS

1-STOP

has built its dynamic reputation on developing IT products and solutions that connect businesses in the Port, Freight and Logistics community to optimise the movement of cargo.

1-Stop is always looking for continual improvements and opportunities to automate Port industry processes.

1-Stop's suite of products is a comprehensive solution for container terminals, freight forwarders, customs brokers, intermodals, importers and exporters to connect with each other. Users can directly access vessel schedules, send unlimited PRAs, track their containers, book times to pick-up or drop off containers, and make online payments with the reassurance of real-time data and messaging and integrated high-end technology.

Join the community of clients who are already benefiting from 1-Stop:

1-Stop is currently the provider of choice for Patricks and DP World, and ICTSI's VICT and MICT.

CONTAINER PARKS AND DEPOTS

Container parks and depots face unique challenges when managing trucks and container traffic, such as long truck queues, congestion and container re-directions. We can provide inter-connectivity between supply chain partners to improve business efficiency and reduce costs. Products to help benefit the container parks and depots include:

TRACKING

ComTrac is electronic information that is sent from 1-Stop's system straight to yours every 2 hours. Used by freight forwarders, transport companies, importers/exporters and 3PLs, this product is perfect for managing cargo.

Data you need

- Receive vessel schedule information including estimated and actual arrival and departure dates. You can also find out when your container needs to be picked up or dropped off!
- Receive updates about your containers movements at the wharves as soon as they happen.
- We have information on most major container terminals in Australia.
- Save time, improve customer service and have peace of mind
- Save time as there is no need to search for information, it will come to you. Our information will automatically update the jobs in your software.
- With reliable, up-to-date information, you will be able to improve the service to your customers.

WE HAVE INFORMATION ON MOST MAJOR CONTAINER TERMINALS IN AUSTRALIA INCLUDING DP WORLD, PATRICK, VICT, HUTCHISON, AAT AND QUBE AND ALL SHIPPING LINES MAKING A PORT OF CALL AT THESE TERMINALS.

TRACKING

The 1-Stop Gateway service, is an online information service that provides a number of applications that improve data transfer, reporting and visibility for the Australian freight and logistics community.

All subscribers to the 1-Stop Gateway have access to the following services:

Vessel schedule visibility

Shipping schedules at your fingertips. We have information from all the shipping lines and major terminals in Australia in the 1 spot. You don't have to look everywhere

Container visibility

The 1-Stop Gateway can provide accurate, up-to-the-minute information on any container entering or leaving Australia through terminal facilities using 1-Stop's services. This includes what vessel it is on, when it is due and which terminal will receive it. Customers can find out the exact date and time a container has been loaded, discharged, gated in or gated out of a terminal.

1-Stop also receives on-board vessel information in advance of the vessel's arrival. This provides valuable details for trans-shipped containers, particularly when the second vessel is unknown to the customer.

Electronic Pre Receival Advice (PRA)

This is an electronic web-based application for the lodgement of export Pre Receival Advices (PRAs). Simple, easy to use and provided at a low cost, this facility is an excellent option for companies who do not have the software required to send this information electronically.

PRA status

Customers can quickly check the latest status of a reported PRA simply by entering container numbers. A display will show the container as either being accepted, pending or rejected.

Customs status

This service displays the current status of an import container as provided by the Australian Customs Service.

OPERATIONS

VEHICLE BOOKING SYSTEM (VBS)

1-Stop VBS was created to solve one problem – port congestion. When truck queues consumed port precincts, truck turnaround time was unpredictable and lengthy. Importers and exporters were bearing the mounting costs of the chaotic and inefficient port operations.

Our flagship product, the VBS, is the premier system for the Terminal to Landside interface.

1-Stop is a globally recognised leader in innovating and delivering integrated solutions to increase productivity for the Port Community. We are committed to working collaboratively with all members of the community to deliver efficiency gains for everyone.

We understand the common issues faced by port communities all around the world:

- Lack of transparent information flow.
- Under-utilisation of equipment.
- Inefficient practices.

Our Vehicle Booking System (VBS) is the tool that drives efficiencies to reduce those common issues. It's not just a booking system – it's a terminal capacity management system.

The results of the 1-Stop VBS system speak for themselves. Within all 13 terminals in Australia, New Zealand and the Philippines that are using 1-Stop VBS, truck turnaround times have significantly decreased and truck movements have substantially increased. Resulting in savings of over \$100M in the Australian industry alone. In the first year that the VBS was implemented in Manila, the two international terminals increased their output by 40%.

1-Stop VBS caters for those who like to think ahead: it allows for more effective time-management and enhanced productivity, without compromising operational success, while still being flexible enough to address the challenges specific to your terminal.

The VBS keeps you ahead of competitors who are still manually keying in data. With data validation and enhanced control of your terminal, your operation is leaner, smoother and ready to respond and grow, in addition to being connected electronically to the community.

SECURITY

MARITIME SECURITY IDENTIFICATION CARD

Combined MSIC and terminal access card for the best value within Australia. A Maritime Security Identification Card (MSIC) is a nationally recognised security identification card for the maritime industry. It shows that you are cleared to enter and work in maritime security zones of our ports, ships and offshore oil and gas facilities.

Maritime security zones are areas within regulated ports, around and on-board regulated Australian ships, which have additional security requirements, as defined by the Maritime Transport Security and Offshore Facilities Act 2003. The MSIC will also cover security zones on offshore oil and gas facilities.

Our MSIC is simply the best value for money. The combined MSIC and terminal access card includes access to Australia's container terminals, and when you purchase MSIC with 1-Stop there's no need to stress about the extra photo cost, or whether the photo is acceptable. That's all taken care of.

Utilising our centralised learning platform, these security cards can be linked to Terminal OH&S inductions and Gate Operating Systems (gos). Our MSIC cards also link to the VBS so you can turn up to the terminal and it's one simple and seamless process.

Partnered with Australia Post

Your photo for the MSIC must meet strict guidelines. 1-Stop has teamed up with Australia Post so that your photo is taken correctly when you lodge your forms.

Induction and training included

1-Stop provides both general and container terminal site specific (Patrick, DP World, AAT, Hutchison Ports Australia and VICT) MSIC online learning and inductions required to access maritime security zones.

PAYMENT

COMPAY

ComPay is an online payment system designed to save you time and money. Use ComPay to make freight, invoice or storage payments. There is one flat fee for multiple transactions.

Use ComPay and:

- **Get faster release of freight**
as payment notification is sent immediately after payment is made and authorised.
- **Save time and money**
by eliminating cheque books, couriers and bank fees.
- **Make your business more efficient**
by redeploying your “runner” to another area of the business.

ANYWHERE, 24 HOURS A DAY, 7 DAYS A WEEK!

CUSTOMS REPORTING

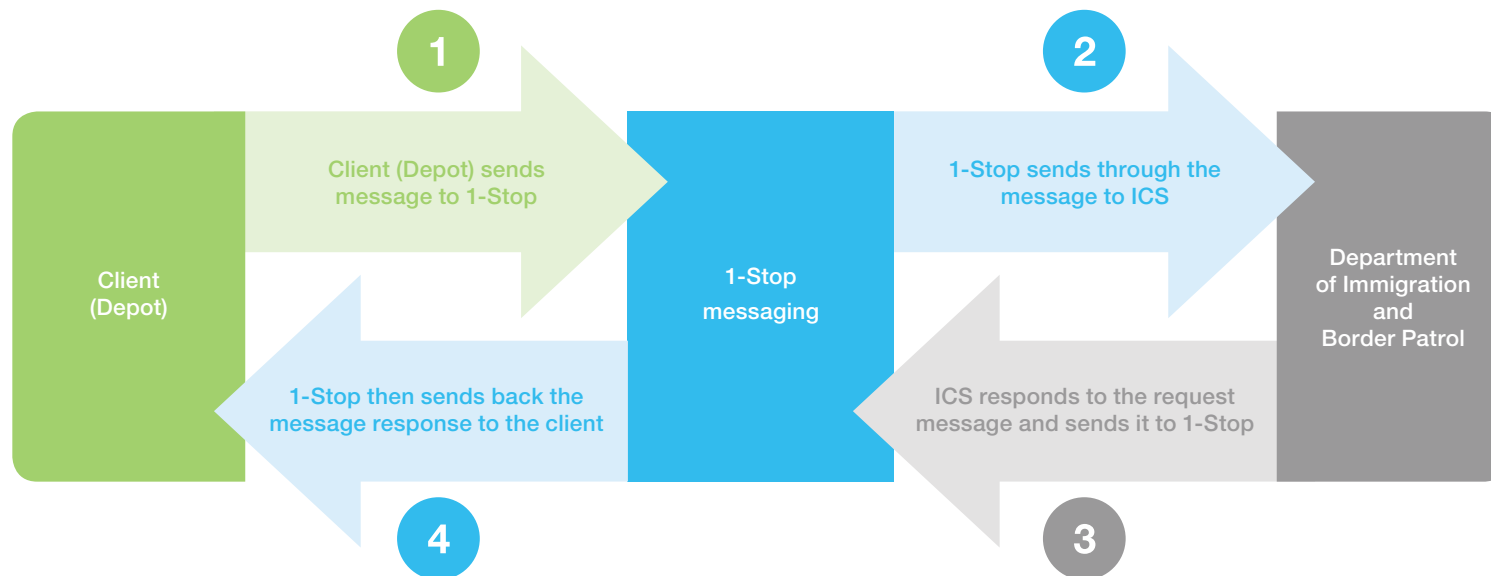

Customs Reporting is a service that enables successful reporting of import and export cargo information to Customs for shipping lines and depots.

Shipping lines and depots have different import and export cargo reporting requirements to Customs. We have developed our service to suit both.

To submit reporting information, just log into our interactive website and fill out the required information. We then translate this and send it off to Customs on your behalf.

Take advantage of the fact that you don't need a digital certificate as we take care of this for anyone who uses our Customs Reporting service.

We are also a very cost effective option for Customs Reporting as you will not need to spend money on in house development – we translate your reporting into “customs language” so that Customs can receive your information.

TESTIMONIALS

1-STOPS booking validation service has allowed the CMA group to manage the export bookings of our customers more efficiently. With the removal of the historic manual work arounds we are able to reduce manual processes, avoid unnecessary costs and overbooking scenarios by catching potential issues at their source. The solution has allowed our teams to focus on our differentiator which is delivering exceptional customer service.

By matching terminal resources to landside demand, the 1-Stop VBS effectively maximises supply chain efficiency resulting in productivity gains to both container terminals and the container industry.

1-STOP's triangulation program "Container Control" allows a straight forward and simple approach to reusing a container, in this challenging period we need to look for every opportunity to improve the supply chain and reduce unnecessary container movements. "Container Control" does both and it has reduced costs for Hamburg Sud Australia and our customers by providing what we consider a standard value added service.

I love 1-Stop! Ever since you started it's been the best thing for us freight forwarders. PRA's are great great, actually better than our database. Great job!
